Cybersecurity issue Disrupt Flights Globally

A technical issue with an antivirus software provider is causing major issues with flights across the U.S. early on Friday morning in what some believe to be one of the largest cyber outages in history.

“The FAA is closely monitoring the technical issue impacting IT systems at U.S. airlines. Several airlines have requested FAA assistance with ground stops until the issue is resolved,” the FAA said in a statement at 6 a.m. EST.

8:31am - Microsoft has announced that the issue has been resolved. Airlines should be back online soon.

“CLT advises passengers to not come to the airport unless they have confirmed their flight information with the airline.”

CTM agents are reaching out to affected travelers for assistance.

We have also contacted our car rental vendors to get policies on returning rental cars to alternate locations.
